## Diprotodon optatum

The massive *Diprotodon optatum*, from the Pleistocene of Australia, was the largest marsupial known and the last of the extinct, herbivorous diprotodontids. *Diprotodon* was the first fossil mammal named from Australia (Owen 1838) and one of the most well known of the megafauna. It was widespread across Australia when the first indigenous people arrived, co-existing with them for thousands of years before becoming extinct about 25,000 years ago.
